

How To Choose The Best Log Home Kit?

Log home kits are being used to build [log homes](#) for so many years. In today's world, log home kit is the most cheap way to build a home and it is also very easy to use. You may not need an architect because log home kits are so easy to use, that you can do assemble them on your own.

You would find as many designs and options in log home kits as you could imagine. The choice can be difficult because of so many available standards and sizes in the market. The best log home kit for you can be the one which suits your family living style.

The log home kits can be categorized in two types, handcrafted log home kits and milled log home kits. The basic difference between the two is that milled logs are prepared at machines and handcrafted logs are prepared by hand. Both logs can be found in good quality and sizes.

One should be aware of the problems associated with a log home kit and also the process it has been gone through in the preparation. The end product depends a lot on the process of drying the log. The recommended way to dry the log is open air, however, because of rising demand of logs, kiln is used to dry the logs in a quick way and make them moisture free.

It is also a fact that no matter what log home kit you have used, all log homes are tend to settle with time; settling means shrinking and compression of the logs. Shrinkage because of settling can be reduced by using well seasoned logs.

Seasoning removes the moisture from the logs and chances of shrinking are reduced. You can't avoid settling due to compression because logs are stacked on top of each other and they have tendency to press down the logs that are positioned underneath. This is mostly the case with tall building structures.

It is wise to ask certain questions to the company representative before purchasing the log home kit. These questions would give you fair idea about the type and qualities of the log. Some of basic questions should be about; preparation process of log, durability of log in your climate, guarantee, warranty and claim issues of logs etc.

These are very basic questions but show a lot about your knowledge of logs. Internet is the best source to start your search for purchasing a log home kit. Narrow your search by your area, and that would show you companies near your location. It is wise to check each company website to find variety in log home kits. Perhaps, the best choice would be the company that has long successful history dealing in log home kits.
